GT Crankshaft

Part	Part no.	Code	Price with tax	Price	Qty per car	Part information
GT Crank Shaft	12200-RRR4A	C	312,900	298,000	1	8-counterweight type

Features

Compared to the genuine NISSAN standard crank shaft, this is a long-stroke crankshaft with a stroke length of 77.7mm, 4mm longer than standard. By using in combination with genuine NISSAN piston (1mm over-size) and the NISMO GT connecting rod, upgrading the engine displacement to 2,771cc ^{*1} is achievable. Die forging and fillet-roll construction was employed to increase the strength. Dynamic balancing treatment with crank only is already practiced.

^{*1} Application for permission for engine modification is required when using these parts for on-road use (in Japan only).

Product Note

· Application for permission for engine displacement volume rework may be required in some locations when using these parts for on-road use.
