

# Skyline GT-R (BNR34) Carbon Aero Parts

Vast experience in race-car development and the results of wind-tunnel testing have been used to create these truly performance-oriented aero parts.

No.	Part	Part no.	Code	Price with tax	Price	Qty per car	Part information
①	R-tune Carbon Hood	65100-RSR45	J	441,000	420,000	1	Painting required; includes air cutout duct; hood pin not needed; built to order; one-year guarantee (in japan only)
②	Z-tune Conversion Air Cleaner Duct	16554-RRR45	J	92,400	88,000	1	For R-tune carbon hood plus normal air cleaner box; for closed circuit use only; built to order

## Features

- R-tune carbon hood
  - Provides improved aerodynamic effect and rectification of cooling air while reducing weight:
    - Compared to genuine aluminum hood, reduction of approximately 3kg
    - Compared the genuine carbon hood, reduction of approximately 1kg
  - Used along with the R-tune air cleaner duct (part no. 16554-RSR46, ¥34,650), improves adherence to the hood and higher effectiveness.
  - Rain visor is attached to the air cutout duct.
- Z-tune conversion air clear duct
  - An air cleaner duct that converts the R-tune carbon hood to the same specifications as the Z-tune carbon hood.

## Specifications

Material: all dry carbon fiber (prepreg)

### Product Note

- Please see the supplied instruction sheets for information on painting the carbon fiber hood.
- Because ram air pressure may result in increased air intake with the Z-tune conversion air cleaner duct, ECU setting may be required. Water can easily enter the engine along with intake air during rainy weather, which can result in engine failure. Please warn the use in the public road in the rain.
- When using the R-tune carbon hood and NISMO air inlet pipe along with a normal air cleaner duct, the duct will contact the reinforcement area to the back of the hood; the section of the duct coming in contact with the hood must be removed. If the normal duct is exchanged for a Z-tune conversion air cleaner duct (for circuit use) or R-tune air cleaner duct (which allows for use on public roads; part no. 16554-RSR46; ¥34,650), no additional machining is required.

## Application

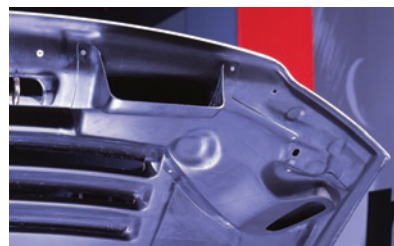

- Skyline GT-R (BNR34) all models

Wind tunnel testing

① R-tune carbon hood

② Z-tune conversion air cleaner duct
