

Rear Member Brace

Vehicle	Model	Part	Part no.	Code	Price with tax	Price	Qty per car	Part information
Skyline GT-R	BCNR33, BNR34 all models	Rear Member Brace Set	55450-RRR45	E	34,650	33,000	1	Set for one vehicle (front/rear, left/right), sold as a set only

* To ensure the improved rigidity of the rear suspension member, we recommend that rear suspension mount bushings (55442-RS5801; four units required) also be installed at the same time.

Features

Attached to the rear suspension link of the rear suspension member, the brace improves rigidity, and controls changes to alignment due to deflection of the suspension member. By bringing out the true potential of the suspension, it improves cornering and traction performance. And by installing the brace, changes to the car are more directly transmitted to the driver, so settings are more immediately understood.

Specifications

Material: STKM (high-carbon steel tubing)
Tubing diameter: ø25.4
Painting: silver
Bent section: reinforcement to increase rigidity

Product Note

· Due to vehicle aging and deterioration, gaps may begin to appear between the brace and the attachment points on the vehicle member. If this occurs, it is suggested that the brace be replaced by a new unit. Installation made when there is too great an offset between the parts, or when made with insufficient torque, can result in damage to the suspension link and member.
