* For the GTS4, the BNR32-use (54440-RS580) unit can be installed.

Features

A hardened mount bush for attaching the steering gear to the member (body). By increasing the hardness of the mount bush rubber, extra motion of the steering gear is restrained, so steering response is improved, with a more direct feel and more minute steering information transmitted to the driver.

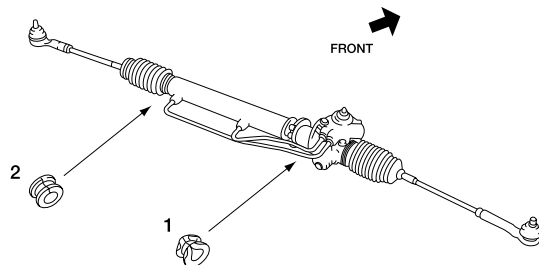

Specifications

- Same materials and design as standard part; bolt-on type.

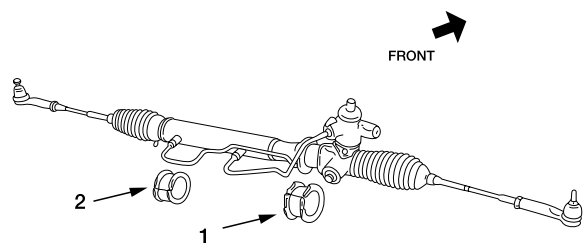

Product Note

- Compared to standard steering, minute bumps in the road and other unevenness will be transferred to the steering wheel.
- Steering may feel more heavy than with standard steering parts.

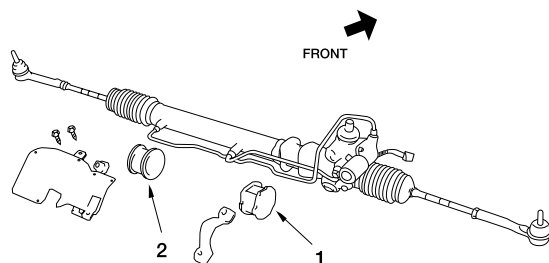

① Silvia (S13 Series)

② Silvia (S14), Skyline (R32, R33)

③ Skyline GT-R (BNR32, BCNR33)

④ Skyline GT-R (BNR34)
